

RESOURCE MANAGEMENT GAME AS A STEALTH ASSESSMENT IN ANALYZING BEHAVIORAL PATTERNS

A Thesis Proposal

presented to

the Department of Software Technology
College of Computer Studies
De La Salle University

In partial fulfillment
of the requirements for the degree of
Bachelor of Science in Computer Science
Major in Software Technology

by

BERNANDINO, Adrian Rafael
BORROMEO, Anton Miguel
GALAN, Russell Emmanuel
GANAYO, Reinman Geoffrey

Terrence ESGUERRA
Adviser

February 12, 2026

Abstract

Consists of 150 to 250 words in a **single paragraph**, that provides the reader with a summary of your research/study and what you intend to do. It should be informative enough to serve as a substitute for reading the thesis document itself. The Abstract should contain the following sentences:

- **Motivation.** One to two sentence(s) describing the research domain or problem area.
- **Problem.** One to two sentence(s) describing the research challenge or opportunity to be addressed in your study
- **Contribution.** One to two sentence(s) describing your intended contribution or how you plan to address the research question
- **Methodology.** One to two sentence(s) summarizing the approach or the manner in which you will carry out your study
- **Significant Results or Findings.** One to two sentence(s) describing your findings and result (This can be skipped during proposal stage)

Keywords can be found at <http://www.acm.org/about/class/class/2012?pageIndex=0>. Click the link “HTML” in the paragraph that starts with “The full CCS classification tree...”.

Keywords: Keyword 1, keyword 2, keyword 3, keyword 4, etc. *minimum of three relevant and descriptive keywords*

Chapter 1

Introduction

This chapter builds the motivation for the conduct of the research through a description of the background of the study or the current state of technology. This is followed by the research objectives, the scope and limitations, and significance of the research. The chapter ends with the research methodology describing the different activities to be conducted to achieve the goals of this research.

1.1 Background of the Study

This section gives the reader an overview of the specific technology or field in the international or local setting. The information regarding the technology or field should be contemporary and not based on outdated sources. Discussion must not be too technical or too detailed.

Follow the inverted pyramid to describe each of the following. Allocate one (1) paragraph per level in the pyramid.

Research area ...

Domain of application or specific research sub-field ...

Synthesis of previous studies...

Paragraph containing the Problem Statement or the Research Question.

This section ends with a discussion on the problem/s faced by or that still exist in the specific technology or field (e.g., limitations of existing software or

algorithms). It should not contain your research objectives or goal; instead, the problem statement would lead to the research objectives to be stated in 1.2.

1.1.1 Figures

Often times, a graph, illustration, screenshot, or any image can help a reader better understand what we say in text. In academic writing, we call them **figures**. Please add as many figures as necessary to help build your narrative, but do not go overboard.

You can add figures in JPG or PNG format as shown in Figure 1.1. All figures should also have a descriptive caption. As a general principle, your caption should adequately describe what is shown in the figure, and not just short texts. If we remove all the surrounding text, the reader should still understand what your figure is.

All figures should be referred to at least once in the surrounding paragraphs. Make sure that you explain what the figure is all about, and that you refer to your figure. You can also use the surround paragraphs to highlight key insights or parts of your figure. For example, Figure 1.1 shows a graph of the performance of Disney stock from the 1980s to 2012.

1.1.2 References

Some notes on citing references. When using APA format, the author-date method of citation is followed. This means that the author's last name and the year of publication for the source should appear in the text, and a complete reference should appear in the reference list.

Here are some examples on how to do the referencing (note author's name and years are different from commented examples). For APA citation details, refer to <http://www.ctan.org/tex-archive/biblio/bibtex/contrib/apacite/>.

- Kartch (2000) compared reaction times...
- In a recent study of reaction times (Kartch, 2000)...
- In 2000, Kartch compared reaction times...
- Fedkiw et al. (2001) compared reaction times...

Figure 1.1: Disney's stock price chart from the 1980s up to 2012. The top chart shows the stock price in each month. The bottom chart shows the change in volume of transactions. The bars are colored based on the type of movement that happened in a month.

- In a recent study of reaction times (Fedkiw et al., 2001)...
- In 2001, Fedkiw et al., compared reaction times...

The following are references from journal articles (Park, Linsen, Kreylos, Owens, & Hamann, 2006; Pellacini et al., 2005; Sako & Fujimura, 2000). Here's an MS thesis document (Yee, 2000), and this is from a PhD dissertation (Kartch, 2000). For a book, reference is given as (Parke & Waters, 1996). Proceedings from a conference samples are (Jobson, Rahman, & Woodell, 1995; Fedkiw et al., 2001; Levoy et al., 2000).

The sample bibliography file named **myreferences.bib** is from the SIGGRAPH L^AT_EXtemplate. You can use a text editor to view the contents of the bib file. It is your task to create your own bibliography file. For those who downloaded papers from ACM or IEEE sites, there is a BibTeX link that you can click; thereafter, you just simply need to copy and paste the BibTeX entry into your own bibliography file.

1.1.3 Code snippet

The following shows how to include a program source code (or algorithm). The verbatim environment, as the name suggests, outputs text (including white spaces) as is...

```
#include <stdio.h>
main()
{
    printf("Hello world!\n");
}
```

1.2 Research Objectives

This subsection states the over-all goal that must be achieved to answer the problem. Address the following: Given your research challenge or opportunity, how do you intend to solve it? What is the main outcome of your research? What kind of contribution do you want to achieve?

The **general objective** is broken down into three or more specific objectives. The **specific objectives** are relatively smaller objectives that help you attain your general objective. You can formulate your specific objectives based on your running questions about the project. For example, the group does not have a good picture yet of the different conversation patterns between humans that can be mimicked by conversational agents. A specific objective can be "to identify different human-human conversation patterns." These objectives must be specific, measurable, attainable, realistic, and time-bounded.

Reviewing related literature, studying a particular programming language or development tool (e.g., to study Windows/Object-Oriented/Graphics/C++ programming), and documentation to accomplish the general objective is inherent in all thesis projects and, therefore, must not be included here.

The specific objectives of this research are as follows:

1. To identify knowledge representation approaches used by existing story generation systems;
2. To identify the different types of storytelling knowledge used in generating stories;

3. To build a neural-based model for generating events comprising a story; and
4. To define evaluation metrics for evaluating the performance of the event generation model.

1.3 Scope and Limitations of the Research

This section discusses the boundaries, with respect to the objectives, of the research and the constraints within which the research will be developed. Describe what is and is not included in the scope of your research, supported by your main research question and findings of previous studies. Do not use weak excuses such as the lack of time and/or knowledge to perform the research.

A good rule of thumb is to allocate one paragraph for each of your specific objectives that (1) contains a brief overview of the concept/theory and the purpose of doing the associated objective; and (2) includes a description of the scope/limitation of your study, and followed by brief purpose, rationale and/or justification for your decisions.

The following should also be indicated in your Scope and Limitations (in the appropriate paragraphs matching the objectives, or as a stand-alone paragraph):

- The profile and demographics of your target participants
- Your data sources (i.e., new data, data from previous studies, data to be provided by some experts, data to be retrieved from social networks)
- The specific technology platform to be utilized
- The methods for collecting the data
- The coverage areas or locations
- The duration or time period (e.g., news articles for the year 2016-2017)

1.4 Significance of the Research

This section explains why research must be done in this area. It rationalizes the objective of the research with that of the stated problem. Avoid including sentences such as “This research will be beneficial to the proponent/department/college” as

this is already an inherent requirement of all BS and MS thesis projects. Focus on the research's contribution to the Computer Science field.

The following are guide questions that may help your formulate the significance of your research.

- What is the relevance and contribution of your work to the computer science community?
 - How does your technical contributions or empirical findings advance the field or grow our body of knowledge?
 - If you built a prototype of an interaction technique, interface, library, tool, or system, what is value does it add compared to existing solutions?
- What will be your contributions to society in general?
 - How will your main stakeholders benefit from your technical contributions or empirical findings?
 - What are the positive social or economic impacts?

Chapter 2

Related Works

This chapter provides a synthesis of past research, existing algorithms, and or state-of-the-art software that are related/similar to the thesis. It should not present detailed summaries of each related work, but rather present a cohesive comparison of different aspects of their work. At the end of each section and this chapter, it should be clear what research challenges and opportunities will be focused on for the proposal.

The sections can be about approaches, application areas, and categories of solutions that give readers an deep understanding of the current state of the field.

Observe a consistent format when presenting each of the reviewed works. This must be selected in consultation with the prospective adviser.

DO NOT FORGET to cite your references. Related works can be discussed multiple times in different sections of this chapter, depending on what is being discussed or compared.

Chapter 3

Theoretical Framework

Please refer to the following resources regarding Theoretical Framework:

- https://link.springer.com/chapter/10.1007/978-1-4419-1454-5_12
- <https://link.springer.com/article/10.1007/s10972-015-9443-2>

Chapter 4

Methodology

This chapter enumerates and discusses the specific steps and activities that will be performed by the proponent to accomplish the objectives of the research. The discussion covers the activities from pre-proposal to Final Thesis Writing.

Ethical issues surrounding the research and the steps to be taken by the research team to adhere to ethical guidelines and principles should be included when discussing each of the activities.

Research activities include inquiry, survey, research, brainstorming, canvassing, consultation, review, interview, observe, experiment, design, test, document, and other similar tasks. The following sections present an example set of activities and methods for conducting computing research. **However, note that your group's actual research activities and methods will be different depending on your intended research contributions. You should consult closely with your thesis adviser for proper guidance. The following sections need not appear in your actual thesis proposal.**

4.1 Data Collection

This section, also called "Data Gathering", focus on activities that will enable the researchers to understand their users and their context better, or to analyze the operating environment where the proposed software may be deployed. The types of activities would include interviews, observations, surveys, focus group discussions, and review of secondary data (reports, videos, manuals) to enable the researchers to identify user requirements; learn the existing processes, strategies,

rules and guidelines; and/or build the datasets and knowledge resources needed in the study.

Ethical issues surrounding the collection of data from human participants, and from internet or 3rd party sources should be indicated. The steps to be taken by the proponents to ensure that ethical guidelines are followed should also be explained.

4.2 Software Design and Implementation

This section covers the design of data structures, knowledge bases, user interface, and algorithms. It includes implementation and related activities - tool selection, unit testing, integration testing, and function testing - that were covered in the course "Software Engineering".

Your Adviser may ask you to separate the Design and the Implementation sections as needed.

You may also indicate a specific software development lifecycle model that you plan to adopt in developing your software, such as the Agile methodology.

For machine learning types of research, this section may be replaced with "Model Training".

4.3 Validation

This section contains the different types of validation activities that you will conduct to evaluate the performance of your model or algorithm or software. It may include user perception studies, end user acceptance testing, usability test, and model validation.

Ethical issues surrounding the collection of data from human participants should be indicated. The steps to be taken by the proponents to ensure that ethical guidelines are followed should also be explained.

This section should include a discussion of the following if working with human participants:

- Participant Selection. Who are your target participants? How will they be

Activity	2021						2022		
	Apr	May	Jun	Jul	Aug	Sep	Jan	Feb	Mar
Data Collection	****	****							
Software Design		****	****	****	****	****			
Validation						****	****	****	

Table 4.1: Gantt Chart of Activities

selected? What data will be collected?

- Orientation. How will ethics be observed? What documents, e.g., validation protocol, will be shared with participants to orient them regarding the research and the validation procedure? Will there be an Informed Consent and Informed Assent? Are they found in the Appendix? Will there be any pre-tests or interviews to be administered prior to the actual experiment?
- Experiment Proper (aka Procedure). How long is the experiment or how long should the user use your software? Is it one-on-one, or one-to-many? What will you do while the experiment is ongoing - observe the participants using a checklist, guide the participants, record the interaction/usage?
- Debriefing. After the experiment, will you administer any post-tests or debriefing to solicit feedback from your participants? What are these?

4.3.1 Calendar of Activities

For the proposal, a Gantt chart showing the schedule of the activities should be added. You can create a table like below, or create a figure. For example:

Table 4.1 shows a Gantt chart of the activities. Each bullet represents approximately one week worth of activity.

Appendix A

Research Ethics Documents

RESEARCH ETHICS CLEARANCE FORM For Thesis Proposals ¹	
Name of student researcher : Juan de la Cruz

DE LA SALLE UNIVERSITY
General Research Ethics Checklist

This checklist is to ensure that the research conducted by the faculty members and students of De La Salle University is carried out according to the guiding principles outlined in the Code of Research Ethics of the University. The investigator is advised to refer to the De La Salle University Code of Research Ethics and Guide to Responsible Conduct of Research before completing this checklist. Statements pertinent to ethical issues in research should be addressed below. The checklist will help the researchers and evaluators determine whether procedures should be undertaken during the course of the research to maintain ethical standards. The University's Guide to the Responsible Conduct of Research provides details on these appropriate procedures.

Details of the Research	
Students	Juan de la Cruz
Thesis Adviser	Jose de los Santos
Department	CCS, Graduate School
Title of the Research	
Term(s) and Academic year in which research is to be conducted	

This checklist must be completed AFTER the De La Salle University Code of Ethics has been read and BEFORE gathering data.

Questions	Yes	No
1. Does your research involve human participants (this includes new data gathered or using pre-existing data)? If your answer is yes , please answer Checklist A (Human Participants) .		
2. Does your research involve animals (non-human subjects)? If your answer is yes , please answer Checklist B (Animal Subjects) .		
3. Does your research involve Wildlife? If your answer is yes , please answer Checklist C (Wildlife) .		
4. Does your research involve microorganisms that are infectious, disease causing or harmful to health? If your answer is yes , please answer Checklist D (Infectious Agents) .		
5. Does your research involve toxic/chemicals/ substances/materials? If your answer is yes , please answer Checklist E (Toxic Agents) .		

Research with Ethical Issues to address:

If you have a YES answer to any of the above categories, you will be required to complete a detailed checklist for that particular category. A YES answer does not mean the disapproval of your research proposal. By providing you with a more detailed checklist, we ensure that the ethical concerns are identified so these can be addressed in adherence to the University Code of Ethics.

Declaration of Conflict of Interest

☐ I do not have a conflict of interest in any form (personal, financial, proprietary, or professional) with the sponsor/grant-giving organization, the study, the co-investigators/personnel, or the site.

☐ I have a personal/family or professional interest in the results of the study (family members who are co-proponents or personnel in the study, membership in relevant professional associations/organizations).

Please describe the personal/family or professional interest: _____

☐ I have propriety interest vested in this proposal (with the intent to apply for a patent, trademark, copyright, or license)

Please describe propriety interest: _____

☐ I have significant financial interest vested in this proposal (remuneration that exceeds P250,000.00 each year or equity interest in the form of stock, stock options or other ownership interests).

Please describe financial interest: _____

Declaration

We certify that we have read and understand the De La Salle University Code for the Responsible Conduct of Research and will abide by the ethical principles in this document. We will submit a final report of the proposed study to the DLSU-Research Ethics Office. We will not commence with data collection until we receive an ethics review approval from the College Research Ethics Committee.

DE LA SALLE UNIVERSITY
Checklist A
Research Ethics Checklist for Investigations involving Human Participants

This checklist must be completed AFTER the De La Salle University Code of Research Ethics and Guide to Responsible Conduct of Research has been read and BEFORE gathering data. The University Code of Research Ethics is available at http://www.dlsu.edu.ph/offices/urco/forms/URCO-Code-of-Research-Ethics_August2011.pdf

NOTE: This checklist is completed after the research proponent fills out the General Checklist Form.

Only answer this Checklist if you answered YES on question 1 of the General Checklist.

Researcher Details	
Students	Juan de la Cruz
Thesis Adviser	
Department	Software Technology Department
Title of the Research	
Term(s) and Academic year in which research is to be conducted	

Provide a brief description of the data collection procedure to be undertaken in the research:

 De La Salle University	Research Ethics Review Committee Research Ethics Office, 3F Henry Sy Sr. Hall De La Salle University Manila 2401 Taft Avenue, Manila 1004, Philippines REO@dlsu.edu.ph (632) 524-4611 loc. 513	SOP No.: 2
		Form No.: 2.03
		Version No.: 1
		Effectivity Date: July 2016

The following should be attached to the checklist:

- A copy of the informed consent form to be used in the study.
- A copy of the instrument/tool that will be administered to the participants.
- If applicable, a copy of the letter seeking permission to collect data from participants who are under the supervision of an agency, institution, department, or office.
- If applicable, a copy of the parental consent form for participants below 18 years old.

The following items refer to important ethical considerations in the conduct of research with human participants. Provide a check for the appropriate answer to each question.

Source of data

Please check all that apply:

	1. New data will be collected from human participants If you checked this item, how will the new data be gathered? Please check all that apply. After answering this question, please proceed to page 3	
		Experimental Procedures/Intervention/ Treatments
		Focus Group
		Personal Interviews
		Self-administered Questionnaire
		Researcher-administered Questionnaire
		Internet survey
		Observation
		Telephone survey
	Others, please specify:	
	2. Pre-existing data from human participants, i.e., from a dataset If you checked this item, please proceed to page 7	

If both options are checked (both new data and pre-existing data), answer all of the questions in this document.

ONLY ANSWER IF NEW DATA WILL BE COLLECTED (item 1 above)

Sampling Details	
Number of Participants/Subjects	
Location where the participants will be recruited/ where subjects will be obtained?	
How long will the data collection take place?	

 De La Salle University	Research Ethics Review Committee Research Ethics Office, 3F Henry Sy Sr. Hall De La Salle University Manila 2401 Taft Avenue, Manila 1004, Philippines REO@dlsu.edu.ph (632) 524-4611 loc. 513	SOP No.: 2
		Form No.: 2.03
		Version No.: 1
		Effectivity Date: July 2016

Who will perform the data collection?	
Location(s) where data collection will take place	
What procedures will be employed to ensure voluntary consent from participants?	
Data Retention	
How long will data with participant identifiers be kept after the publication of the first paper from the project?	
How long will anonymized data be kept after the publication of the first paper from the project?	
Procedure for Informed Consent	
How will informed consent be recorded? (check all that applies) Reminder: please attach informed consent that will be used in the study	☐ Written Consent ☐ Audio-recorded Consent ☐ Online/Email recorded Consent ☐ Others, please specify:

If you will not obtain a recorded informed consent, answer the questions that follow:

Why does the waiver of informed consent not pose a threat to the welfare and rights of the participants?

Why is recording an informed consent not practical for the proposed study?			
	Yes	No	Not Applicable
1. Will the research involve students who will be receiving course credits for their participation? If YES, please attach a copy of the consent form and a summary of the debriefing process that will help			

 De La Salle University	Research Ethics Review Committee Research Ethics Office, 3F Henry Sy Sr. Hall De La Salle University Manila 2401 Taft Avenue, Manila 1004, Philippines REO@dlsu.edu.ph (632) 524-4611 loc. 513	SOP No.: 2
		Form No.: 2.03
		Version No.: 1
		Effectivity Date: July 2016

participants understand how their participation in the research has provided a relevant learning experience to the crediting course.			
2. Does the study involve participants below 18 years old or those who are unable to give their informed consent? If YES, please attach a copy of the parental consent form.			
3. Is there a possibility that the research can induce physical and/or psychological harm to the participants? Will they experience pain or some discomfort as a result from their participation in the research? If YES, please attach an acceptable argument that outlines the benefits of doing the research and how they outweigh the cost of harming the participants.			
4. Will the participants be deliberately falsely informed or made unaware that they are being observed? Will they be misled in a way that they will possibly object to or show unease when told of the real purpose of the study? If YES, please attach an acceptable argument that outlines the benefits of doing the research and how they outweigh the cost of harming the participants.			
5. Will the research involve the discussion of, or questions on, sensitive topics (e.g. sexual activity, substance abuse, or mental health)? If YES, please make sure that the informed consent form explicitly states that sensitive questions will be posed and that you will safeguard the anonymity of the participants and ensure confidentiality. Please attach a copy of your informed consent form and your instrument.			
6. Will the research involve the administration of drugs, or other substances to the participants?			

 De La Salle University	Research Ethics Review Committee Research Ethics Office, 3F Henry Sy Sr. Hall De La Salle University Manila 2401 Taft Avenue, Manila 1004, Philippines REO@dlsu.edu.ph (632) 524-4611 loc. 513	SOP No.: 2
		Form No.: 2.03
		Version No.: 1
		Effectivity Date: July 2016

If YES, please attach an acceptable argument that outlines the benefits of doing the research and how they outweigh the cost of harming the participants. Please also attach a description of the procedure that will ensure that the participants will be brought back to their physical and psychological states prior to their participation in the research.			
7. Will biological samples (e.g. blood, saliva, urine) be obtained from the participants? If YES, will this involve invasive procedures? Please attach a description of these procedures.			
8. Will genetic materials be obtained from the biological samples? If YES, please attach a description of the procedures that will ensure confidentiality. Please attach the informed consent form.			
9. Will financial inducements (other than reasonable expenses, like transportation or meal allowances) be offered to the participants for their participation in their research? If YES, the researcher(s) should be mindful of how the inducements can influence the participants' responses or behaviors during the research. Indicate the financial inducements offered to the participants: _____			
10. Is there a possibility for groups or communities to be harmed by the dissemination of the research findings? If YES, please attach a description of procedures to ensure the anonymity and confidentiality of the research findings.			

 De La Salle University	Research Ethics Review Committee Research Ethics Office, 3F Henry Sy Sr. Hall De La Salle University Manila 2401 Taft Avenue, Manila 1004, Philippines REO@dlsu.edu.ph (632) 524-4611 loc. 513	SOP No.: 2
		Form No.: 2.03
		Version No.: 1
		Effectivity Date: July 2016

Answering YES to most of the above items will signal an ethical issue that needs to be addressed. Some actions that will allow adherence to research ethical principles are provided with each item. The researcher is advised to refer to the University's Guide to the Responsible Conduct of Research for the appropriate procedures to ensure adherence to ethical principles in the conduct of research.

Declaration

We certify that we have read and understand the De La Salle University Code for the Responsible Conduct of Research and will abide by the ethical principles in this document. We will submit a final report of the proposed study to the DLSU-Research Ethics Office. We will not commence with data collection until we receive an ethics review approval from the College Research Ethics Committee.

FOR PROPONENTS WHO WILL GATHER NEW DATA ONLY, PLEASE STOP ANSWERING.

Use of Pre-existing Data collected from Human Participants		
Indicate the dataset from which the data for the study will be sourced		
Is the data publicly available, i.e., the access to which does not necessitate an approval process?	Yes	Please indicate where the dataset is available:
	No	Please indicate/attach the approval authority for access:
Was the original dataset originally collected for the present study's purpose?	Yes	Please attach the Consent Form used in the original study.
	No	Please attach the Information Collection Statement (i.e., the statement given to informants providing them with the rationale for the collection of specific information).
Does the original data set contain sensitive data, that is information that an individual would not likely want to be disclosed publicly, e.g., data on sexual activities, substance use?	Yes	Please describe the type of sensitive data to be used in the present research:
	No	
Does the original dataset have personal identifiers?	No	<i>(This means that neither the researcher nor the participant provided any personal identifiers)</i>
	Yes, specifically:	_____ Direct (i.e., the participant provided personal details like name and address) _____ Indirect (i.e., the participant was given a respondent code to make the participant identifiable)
Will new data be collected and analyzed along with data from the existing dataset?	Yes	Please answer questions on page 3-5.
	No
